The Platform Business Model Canvas - Designing And Visualizing Platform Business Models

Davis A. Eisape

Chair for Innovation Economics, Institute for Technology and Management, Faculty of Economics and Management, Technical University of Berlin (TU Berlin), Berlin, Germany

Abstract: Literature research has shown that there is no proven business model canvas for platforms. Such a canvas would be a vital tool that provides added value to companies and innovators for various purposes: sharing, communication (internal and external), description, analysis, management, planning and partnering. In addition, a platform business model canvas helps follow a systematic but also pragmatic approach with regards to the transformation of a pipeline business to a platform business, designing a new platform or describing an existing platform business model. This research introduces a platform business model canvas that is easy to use and helps capture platform business models in a comprehensive and effective way following the Design Science Approach. The basic components for a platform business model and the four perspectives are introduced and assembled to form the platform business model canvas. It is then applied in an illustrative case study to visualize the platform business model of Airbnb.

Keywords: platform business model canvas, design science approach, Airbnb Case Study, strategy tool, innovation strategy

INTRODUCTION

Platform business models are the future in many areas [1]. In contrast to so-called pipeline business models, in which products or services are created using available production resources and are actively offered on the market, platforms simply align the needs and interests of market participants [2]. They are virtually matching machines that ensure that a large number of providers reach a large number of consumers. Large and small providers can thus significantly increase their reach [3]. At the same time, users and consumers can search through the offers more individually and find the right solution. In this manner, more availability attracts more demand and vice versa. But also, more demand creates more demand (viral marketing) and more supply creates more supply (best practice). enables platforms to scale rapidly. These phenomena can be summarized under the terms direct and indirect network effects [4]. To design a new platform, designers must understand and balance the interests of the stakeholders from the outset [5]. In addition to providers and customers, there are also partners who are important for the functionalities on the platform and the platform owner [6].

Literature research has shown that there is no proven business model canvas for platforms. Such a canvas would be a tool that provides added value to companies and innovators for various purposes: sharing, communication (internal and external), description, analysis, management, planning and partnering. Kindström emphasizes that a business model approach to researching a particular organization provides a useful analytical framework for understanding the organization and its inherent components [7]. In addition, a platform business model canvas helps follow a systematic but also pragmatic approach with regards to the transformation of a pipeline business to a platform business, the task to design a new platform or to describe an existing platform business model. As there is not yet a comprehensive approach that would empower managers in their efforts to analyze, describe or create a platform business model, the central research goal is to fill this gap[8].

March & Smith presented design science as a scientific category to find solutions to real-world problems [9]–[11]. The question whether the solution orientation of this paper is sufficient for a scientific work is answered by the methodological context put forward by Hevner et al, as Wieringa summarizes: "(1) business needs motivate the development of validated artifacts that meet those needs, and [...] (2) the development of justified theories about these artifacts produces knowledge that can be added to the shared knowledge base of design scientists[11]".

The paper proceeds as follows. The basic components (or building blocks) and the necessary perspectives for the platform business model canvas, are derived from literature. The need for three or more perspectives, is furtherly discussed on basis of Osterwalder's business model canvas by outsourcing dimensions of control. Components and perspectives are then put together to form a platform business model canvas, which is applied in an illustrative case study of Airbnb showing how the canvas is used.

INTRODUCING THE COMPONENTS OF THE PLATFORM BUSINESS MODEL CANVAS

Taking literature and existing platform business model canvas in account ([12]–[17], compare [18], [19]), the platform business model canvas that this research introduces consist of the following components/building blocks: Core Value Unit, Job, pain, gain, Key

table 1)[8].

other active platform stakeholders participate to gain some sort of value. This can be money, merit, fame, knowhow, resources, etc. that result from successful transactions.

Volume: 6 Issue: 2 | 2020

Table1. Basic Platform **Business** Model

Activities, Key Resources, Channels, Revenue Streams,

Cost Structure, Transaction, Key Partnerships, Customer, Owner, Contributor, Filters, Governance (see

Construct	Description	
Basic Platfor	rm Business Model Components/Building	
	Blocks	
Core Value	This is the center piece of every	
Unit	platform. It describes the smallest unit	
	that is created and consumed. It is the	
	connection point between all	
	stakeholders of a platform.	
Job, pain,	Every player that decides to join a	
gain	platform has the goal to solve a problem	
	or to satisfy an own need. Therefore, for	
	a platform owner to be able to match	Transaction
	interests he or she must understand	
	how a solution made on the platform by	
	one platform user can be newer, better,	

more up to date, cheaper, easier or more

user-friendly with respect to the needs and problems of another platform user. Kev Participating on a platform means to be **Activities** active. The key activities of every participant that are necessary to keep platform working, must be portrayed to understand how stakeholders can be stimulated to be

Kev Resources In a platform eco system every participant that is active has some sort of costs related to these activities. Running, Contributing, Providing, or Consuming over a platform always needs some sort of resources involved. From time, to internet connectivity, to money, goods, know how, technology, etc. various resourceful activities by the various stakeholders need to be understood as e. g. it may be the goal to keep the platform entry as low-barrier as possible. Therefore, it is necessary to understand, what are the important expenses for each player without which the platform business model would not work.

Channels

Potential participants can only participate in something they know about and where they have access to. Understanding through what channels stakeholders can be addressed is key to have a working platform.

Revenue **Streams**

There are often several ways to capture value. The platform owner as well as the

Cost

Looking at the cost structure in context of a platform business model it becomes clear that platform participants basically have two types of costs, the key resources needed to participate on a platform (as mentioned above) and costs related to successful transaction between platform participants. Therefore, to reduce complexity, hereinafter cost structure and revenue will be subsumed to transactions that are always to be understood as bidirectional, representing cost and revenue.

Transactions are the result οf complementarily corresponding interests, where two needs are met through the exchange of goods, services, information or money. Therefore, it is key to understand what can be transacted and how each platform-user can benefit from transactions.

Key **Partnerships**

Platform owners often need technology, know-how, processes or resources of key partners to generate value on the platform. Apart from facilitating activities or increasing the effectiveness of the platform it can also help to spread risks across several shoulders.

Customer

Depending on the platform they can be called Users, Buyers, Consumers, etc. Although a platform does specifically aim at customers in the real sense of the word, as it does not sell something to a specific group of people, a platform must understand how participants can be customers to suppliers that offer products, services or information on the platform. Therefore, while designing or portraying a platform often-interchangeable role consumers and providers needs to be understood.

Owner

The platform owner has a unique perspective, as owner's interests are the brackets around the activities on the platform. Laying out the owner's perspective is vital to have a holistic understanding of the platform's functionalities.

Contributor

Depending on the platform they can be called Contributors, Suppliers, Sellers,

www.ijisset.org

The second dimension of outsourced control will be to place the production of goods or the provision of services into external hands, which transforms a business from a producer or service provider to the business model of a publisher [8], [22].

Volume: 6 Issue: 2 | 2020

The third dimension of outsourced control would be to invert control and pass it to the customers. This means that the control over the entire area of customer approach and customer management is outsourced, so that the "control" or better the initiative lies with the customers. This phenomenon is known as crowdsourcing [8], [23].

The fourth dimension of outsourced control is when organizations or individuals use resources to create products or provide services but don't pay for the costs and don't capture value. The creative commons approach to copyright may be a concept that applies here [24].

Simultaneously outsourcing the first and second dimension of control creates a business model, where customer relationship and capturing value is in the center of internal activities which ought to be aligned with an external product and service creation and external resources. This perfectly describes the business model of sales agents/broker [8], [25].

A platform in some extend is the combination of a strategic alliance, with publishing activities, where products are created by a crowd of innovators that sometimes may be open source but always have inherent the ability to match interests of demand and supply like a broker.

The business model canvas therefore cannot consist of principal areas that solely lay within the activity radius of a firm. It needs to facilitate the understanding and alignment of these external value propositions and external activities. Which is represented by the basic four perspectives: owner, key partner, consumer and provider[8].

INTRODUCING THE PLATFORM BUSINESS MODEL CANVAS (PBMC)

The building blocks are assembled in a triangular pyramid-like arrangement with respect to the perspectives. The top of the pyramid is central to a platform, and all the components below carry and support the respective components above it[8].

The pyramids *consumer*, *provider* and *partner* consist of the components job, pain, gain, transaction, which encompasses cost and revenue, resources, activities, channel and filter. Job, the demand or the need for something, is the top of the pyramid, supported by gain that describes the motivation for a demand or a need, and pain that describes challenges and barriers

Providers, etc. Participants that offer something on a platform are vital for possible transactions and therefore need a dedicated perspective, to be understood.

Filters

A vital tool to keep platforms healthy and working are filters that make sure that the right people get access to the platform. This not to be mistaken for search filters that participants use to find other participants on the platform. Filters allow for a barrier-regulation, to coordinate who gets access to a platform and who doesn't. Their coordinated absence make sense in a no-barrier driven approach, whereas their presence make sense in a curated approach.

Governance

Every platform needs some rules to promote and ensure a healthy environment, where innovation and transactions can thrive. Protecting value as well as stimulating value creation are key elements that require governance.

INTRODUCING THE FOUR PERSPECTIVES OF A PLATFORM BUSINESS MODEL

This chapter will discuss the "four dimensions of control" which directly correspond to Osterwalder's four principal areas, which are value proposition (the product/service), the infrastructure (activities, resources and partners), the customers (relationship, channels and customer segments), and the revenue model (cost structure and revenue streams).

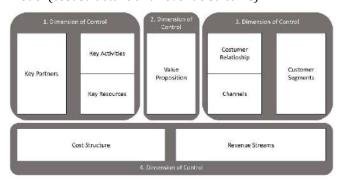

Figure 1. Four Dimensions of Control in a Business Model adapted from Osterwalder [20]

The first dimension of outsourced control will be to place the handling of key infrastructure into the hands of external partners. In this case, a business stands before the challenge to induce key partners to offer key product parts, processes, resources, technologies, know-how and activities to its business activities. Therefore, a firm must truly understand the business model of its key ally/partner in order to create a business opportunity for them that in return helps its own business purpose [8], [21].

www.ijisset.org

pyramid[8].

When designing or describing a platform, which is always the description of a one- or multi-sided market, a minimum of three pyramids, the owner, the supplying participant and the demanding participant, are necessary. Of course, roles can be overlapping and interchanging, but each role type is described through a respective pyramid. When a platform does not only have owner, suppliers and demanders, but also a partner that through the contribution of key knowhow, technology, processes or information is critical to the platform, is also represented through a participant

Volume: 6 Issue: 2 | 2020

associated to the demand or the need being met. After a demand or a need is being met, the exchange of assets in form of costs or revenue constitute transactions. The prerequisites for successful transactions are the use of key resources, effective key activities, the ideal access channel to the platform for each participant and increasing the matching of the right complementary participants through filters, by helping to sift out innovation and transaction inhibiting participants[8].

To create a canvas that aggregates all four perspectives the four triangles are aligned on their isosceles sides, whereby the triangular apexes are inside-lying, connecting to each other (see figure 3). The four triangles create a four-sided 3D-pyramid that is then supplemented by the so-called core value unit of the platform at the top. When designing or describing a platform the core value unit is key to every perspective. This value unit must directly correspond to the demand and need every stakeholder has[8].

The pyramid of the owner consists of the building blocks job, pain, gain, transaction, which encompasses cost and revenue, resources, activities, channel and governance, whereas the components have a slightly different meaning compared to the same components of participant's pyramid. Since the focus of the owner is to run and manage the platform job pain and gain can be understood almost as a mission statement for the platform, where the goal is always to match peoples interests in a certain area of service, information or innovation. As a platform owner is interested in capturing value through successful matches and transactions therefrom, understanding cost structure and revenue streams is vital. The last four components help design the framework of the platform. Key resources and activities help keep the platform running. The channel makes the platform available to participants and governance summarizes mechanisms and rules that help keep the platform healthy and prosperous[8].

The model also helps describe and understand an internal and an external view. The owner and the partner are part of the internal perspectives, as they are key to the backend of the platform. The external view is what the users can 'see' from the platform, basically the frontend[8].

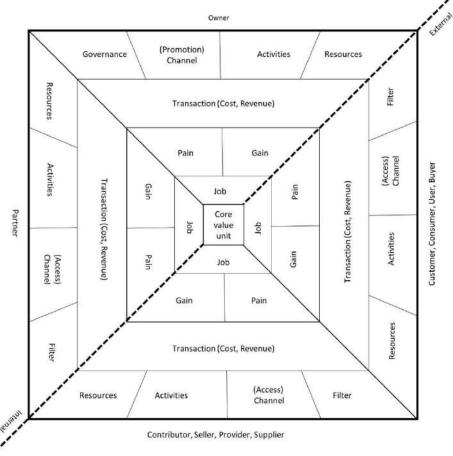

Figure 2. The platform business model canvas according to Eisape[8]

Cell

Gain for consumer

MODELLING THE PLATFORM BUSINESS MODEL OF AIRBNB

Evaluating the adequacy of the building blocks, the model and its instantiation (the canvas) will be accomplished by employing them to describe an existing platform business model in form of an illustrative case studies. Jahn describes that the illustrative case study is appropriate to illustrate previously identified basic patterns, such as a model [26]. Although there are different types of platform business models, Gawer argues that "at the level of architecture all platform systems are fundamentally the same[27, p. 26].", calling for a universal approach. Therefore, one illustrative case study is conducted explaining the platform business model of Airbnb, thus underlining Gawer's argument, see also [8].

The approach is to define questions that directly correspond to the components of the platform business model canvas. Therefore, the questions are derived from the platform business model canvas component definitions. Answering the questions is then done by using Airbnb's websites as well as already existing case studies addressing Airbnb's platform business model from literature as sources of information (see table 2).

Table 2. Questions and answers to fill the cells of the platform business model canvas for the illustrative case study on Airbnb

Construct	Content/Description		
Question	Questions and Answers for each Cell of the Platform		
Business Model Canvas in the Case of Airbnb			
Cell	Consumer		
Question	Who are key users, buyers, consumers?		
Answer	"travelers looking for short-term		
	accommodation" [28, p. 35]		
Cell	Job for consumer		
Question	What job can a user, consumer, buyer get		
	done? What need of the consumer, user, buyer		
	can be met?		
Answer	find "short-term accommodation" and		
	"discover their holiday destinations, or the city		
	they just permanently moved to, just like the		
	locals do" [28, p. 35]		
Cell	Pain for consumer		
Question	What are dangers, problems and barriers		
	related to the job done or the need met. How		
	can the platform help reduce, eliminate or		
	solve these?		
Answer	"rented house was not as shown in the		
	pictures" [29, p. 1]		
	"guests of the Airbnb rentals have (1) been		
	targets of crime, (2) had valuables stolen while		
	staying at these properties and (3) may in fact		
	be more exposed to a greater range of crimes		
	due to not being in a tourist location." [30,		
	p. 1]		

Question	What are positive effects related to the job and		
	need? How can the platform enhance these		
	positive effects?		
Answer	"authenticity: Living in an Airbnb place		
	represents local ways of life" [31, p. 32],		
	"consumers' sensitivity level to price: I am		
	more willing to purchase the Airbnb place if		
	I think it is cheaper than a hotel room." [31, p.		
	32] and		
	"Electronic Word-of-Mouth: To make sure I		
	choose the right Airbnb place, I often read		
	other tourists' online reviews" [31, p. 32]		
Cell	Filter for consumer		
Question	What are possible access barriers? How can we		
	eliminate them? Who are potential users,		
	buyers, consumers that we don't want on the		
	platform? How can we ensure that they don't		
	-		
Anc	get access to the platform?		
Answer	"Hosts need a safe way to block people from		
	contacting them or booking their listings" [32,		
	p. 1]		
	"watchlist and background checks" [33, p. 87]		
	"7M+ Airbnb listings worldwide, 100K+ cities		
	with Airbnb listings, 220+ countries and		
	regions with Airbnb listings" [34]		
	"Airbnb is an online community and service		
	that's based on the internet. It's available 24-		
	hours-per-day, seven-days-per-week, from any		
	computer or mobile device that connects to the		
	internet" [35], [36]

Partner

Question

Who are key partners to keep the platform running and thriving?

Answer

- 1. Payment method partners: PayPal, Alipay, PayU, SofortÜberweisung[51]
- 2. IT-Infrastructure: Amazon Web Services [52], [53, p. 321]
- 3. Services supporting hosts:
- a. "Guesty: An integrative platform to manage multiple accommodation rentals via a single, integrative, cloud-based solution" [37, p. 44]
- b. "HonorTab: "A minibar-like service that allows hosts to manage inventory and charge for groceries and other consumable amenities (shampoo etc.)" [37, p. 44]
- c. "Hostmaker: A Management company for accommodation rentals that handles everything from furnishing, to listing, housekeeping, pricing, and maintenance" [37, p. 44]
- d. "Keycafe: A service that mediates access to accommodation rentals by providing pickup and drop-off points from lockers" [37, p. 44]
- e. "Pillow: A management company for accommodation rentals that takes the work out of renting" [37, p. 44]
- 4. "Maps, payment platforms, cloud storage, identification platforms are important but they are not proprietary any longer." [54]
- 5. "Insurance companies, while very important and initially challenging to make a deal with, by now are not a big challenge any longer." [54]

Cell Job for partner

Question What job can partners get done? What need of

partners can be met?

Answer "Hosting teams are

r "Hosting teams are separate businesses that provide professional hosting services to help you manage your listing. If you qualify, we'll match you with a hosting team in your area."

Volume: 6 Issue: 2 | 2020

"[Airbnb] now uses some 200 AWS instances for its application, memory, storage, and search servers to support its Web site." [53, p. 321]

"Maps, payment platforms, cloud storage, identification platforms are important but they are not proprietary any longer." [54]

"Insurance companies, while very important and initially challenging to make a deal with, by now are not a big challenge any longer." [54]

Cell Pain for partner

Question What are dangers, problems and barriers related to the job done or the need met. How can the platform help reduce, eliminate or

solve these?

Answer Catch attention of guests and hosts: "Airbnb's business model poses an interesting challenge—the thousands of customer service

agents, operating out of 20 physical locations around the world, serve both hosts and guests. That Global Customer Experience team aims to ensure a positive customer experience that begins on Airbnb's platform and extends for

the duration of a stay." [55]

"when the Customer Experience team first started at Airbnb, support was provided in English. Today, Hassell's team monitors 20 languages in text-based support with the assistance of Zendesk multilingual capabilities. Phone-based support is also offered in 11 languages, and English and Mandarin support

is provided 24/7." [55]

Cell Gain for partner **Question** What are positive ef

What are positive effects related to the job and need? How can the platform enhance these

positive effects?

Answer "For a fee—generally around 20% per booking—hosting teams will manage everything from setup and booking to checkout

and cleaning." [50]

Cell Filter for partner

Question What are possible access barriers? How can we eliminate them? Who are potential partners that we don't want on the platform? How can

we ensure that they don't get access to the platform?

Answer Airbnb is an online community and service that's based on the internet. It's available 24-

that's based on the internet. It's available 24-hours-per-day, seven-days-per-week, from any computer or mobile device that connects to the

www.ijisset.org

3. CONCLUSIONS

The goal of this research was to present a platform business model canvas that is easy to use and helps capture platform business models in a comprehensive and effective way.

The constructs, which are the basic components/building blocks as well as the necessary perspectives of the platform business model canvas are derived from literature and furtherly discussed on the basis of Osterwalder's canvas. This is an innovative approach, that will surely spark some discussion. They were then put together to form a platform business model canvas which is then instantiated through an illustrative case study.

A major area of contribution is the field of academic research. In general, future researches besides describing more platform business models can try to analyze and explain possible links between the economic impact of platforms and their business models with the help of this platform business model canvas. Future research may also alter and adapt this canvas for further applicability in new areas of platform business models, e.g. non-profit platform business.

Another major area of contribution is the high practical relevance, which enables e.g. managers and business developers to design or describe a platform business model with the Platform Business Model Canvas. The tool takes users step by step through the cells and in a very hands-on-approach helps to visualize a platform business model.

One may argue, that the building blocks defined for the platform business model canvas are very close to those of Osterwalder's business model canvas. Since it is the widely adopted standard in business modelling, the intuitiveness and effectiveness were transferred to the platform business model canvas.

The order of answering the components does play a role, although this paper doesn't highlight it. Concentrating on the components job, pain and gain for each perspective, before then defining the core value unit and then attending the other components can help to create the match of needs and offers right from scratch.

To get an even better result with regards to the illustrative case study on Airbnb, expert interviews with leading Airbnb-employees or stakeholders may help to verify and produce useful feedback on the mapped content and on the eligibility of the platform business model canvas. This case study does not claim to be exhaustive but illustrates a successful instantiation of the platform business model canvas.
